RTMS® G4™ Certified by FDOT TERL

The RTMS® G4™, developed by Image Sensing Systems (ISS) has successfully passed test and evaluation of the Florida Department of Transportation's Approved Product List for Statewide Procurement of ITS Equipment. The RTMS has passed numerous acceptance tests throughout the State over the past several years, but this recent test holds even more significance.

"The State of Florida standardized their specifications for ITS, and to have a product tested and approved to those specifications by the Florida DOT TERL (Traffic Engineering Research Lab) provides third party confirmation that the product performs to the stringent levels of performance and operation required by the State," says Jim LaBatt, major supplier of ITS equipment in the State of Florida and throughout the US.

TERL, the FDOT group responsible for evaluating products, has assigned the RTMS G4 with Approved Products List (APL) number 78661900830011. This is another confirmation of the accuracy and performance of RTMS since RTMS had previously passed the State vendor qualification process and the RTMS X3 already exists on the Approved Product List for Traffic Control Devices.

"To meet a standard specification from a professional team evaluating products in a very structured and organized process gives agencies in Florida the confidence that these products will perform as required and as advertised," says Mike Ouellette, Vice President of Sales for RTMS in North America. "We are dedicated to fully supporting Florida with their ITS needs and look forward to continuing to provide them with quality detection devices on all present and future ITS projects."

ISS is recognized around the world as the leading provider of outstanding and affordable radar and video detection traffic management solutions. It has been at the forefront of the development of innovative technology for advanced traffic management applications for over 20 years. Sensors developed by ISS have been provided for transportation, security, and safety applications in over 60 countries.
